APEX INTEGRATION INC.

SEE THE BIGGER PICTURE

One partner from the cable in the wall to the AI in your workflow.

Apex Integration designs, connects, and operates enterprise systems as one coherent whole: networks that refuse to drop, software that fits, and digital twins that let you see it all at once.

FIELD-PROVEN SCENARIOS

Where our service range goes to work

Representative deployments from the field-proven platform ecosystem we build and integrate on — the range of what Apex can deliver for your operation.

Maritime & Offshore

Vessels and platforms kept online by blending LEO satellite, 5G cellular, and narrowband backup into one bonded connection — command, crew welfare, and telemetry that survive open water.

Public Safety & Emergency Response

Rapid-deploy communications for first responders when ground infrastructure fails — wildfire, flood, and disaster scenes connected in hours on carrier-approved, mission-grade equipment.

Transit & Vehicle Fleets

Buses, service fleets, and rail connected in motion: live vehicle tracking, onboard passenger Wi-Fi, and fare or camera systems that roam across dead zones without dropping a session.

Retail & Branch Networks

Hundreds of locations rolled out with zero-touch provisioning; every store gains instant cellular failover so payments and operations keep running when the primary line goes down.

Construction & Remote Sites

Day-one internet for sites fiber hasn't reached — bonded cellular and satellite for offices, cameras, and IoT, then a clean handover to permanent infrastructure we cable and build.

Events & Broadcast

Pop-up networks and bonded video uplinks for productions, festivals, and live events — broadcast-grade streaming from anywhere a truck or a flight case can reach.

100+ countries
Underlying platforms deployed and supported worldwide

Multi-orbit + 5G
LEO and GEO satellite bonded with cellular and fixed lines

Zero-touch
Whole fleets provisioned and managed remotely, at scale

Certified engineering on field-proven platforms — scoped, deployed, and supported from Waterloo, Ontario.

THE FULL RANGE

Six disciplines. One accountable partner.

Most vendors sell you a piece. We take responsibility for how the pieces work together.

Enterprise Networking & 5G Mobility

Multi-WAN architectures that bond 5G/LTE, satellite, and fixed lines into one dependable connection — automatic failover, SD-WAN policy control, private 5G, and cloud remote management from branch offices to vehicles and vessels.

Digital Twin Integration

Complex facilities turned into interactive 3D twins tied to live telemetry — one spatial foundation reused across sales demos, simulation, training, and operations, deployed in days rather than quarters. Industry research (McKinsey) links digital twins to up to 50% faster development and 20–30% operational gains.

Outsourced Software Development

A senior engineering team on demand: web platforms, API and systems integration, cloud services, and the middleware that makes separate platforms behave like one — fixed-scope projects or embedded teams.

AI Consulting

Practical adoption over hype: honest use-case assessment, retrieval assistants and automation built on your own data, and governance that keeps deployments safe, auditable, and inside the tools your teams already use.

Cabling & Data Center Solutions

Structured copper and fiber cabling, rack and enclosure builds, power and cooling planning — labeled, documented, and built to grow, for new builds, refits, and expansions.

Video Surveillance & Monitoring

Camera systems designed, installed and maintained for your site — recording and analysis happen on site, so footage stays on your property and keeps recording when the internet does not. People and vehicle detection, remote review, and NDAA-safe hardware.

Hardware, sourced and staged

Through our distribution partnerships, equipment arrives ready to work — not in a pile of boxes:

- Pre-configured routers and gear, shipped ready to install
- Carrier-aligned 5G/LTE SIM provisioning and activation
- Deep channel inventory for next-day availability
- Logistics coordinated across North America, LATAM, and Europe

HOW AN ENGAGEMENT RUNS

01 ASSESS — Map the whole terrain first

02 DESIGN — Architecture built for failure

03 DEPLOY — Staged, tested, zero-touch

04 OPERATE — Monitored, documented, yours

Ready to see your systems from above?

Start with the outcome. We'll chart the route — an engineer replies within one business day.
